

Supplemental Fig. 1 legend.

Figure 1 suppl. A. Immunoprecipitation (IP) of p85, p55 and p50 (arrowheads) regulatory subunits of PI3K with PDGFR in NHERF1(+/+) and (-/-) MEFs. **B.** Overlay assay showing stronger direct binding of PDGFR to NHERF1 compared to EGFR. The membrane with equal amounts of the proteins indicated on top was incubated in a first (1) step with NHERF1 and then cut in half. Each half was incubated in a second step (2) with Myc-PDGFR-CT or Myc-EGFR-CT (10 μ g/ml). The halves were reassembled and further processed by Myc antibody followed by secondary antibody incubations.
